CLINICAL BULLETIN

To: All Field Providers

From: Clinical Services Department

Subject: **ImageTrend Built-In Camera Function**

Date: December 13, 2017

Good news everyone! ImageTrend has added a camera function to the attachments menu! Why is this good news? Say goodbye to OfficeLens, Image_resize, delete.pics, etc! This will greatly streamline the process for attaching images to the PCR. This update is now live on our version of ImageTrend and can be utillized on Elite Bridge or Elite Field. Here is how it works:

1. Inside an ImageTrend PCR navigate to Menu → Attachments → Add New Attachment. You will see a new option for Take Photo

2. If this is the first time that particular tablet has used the camera function in ImageTrend you will be prompted to allow the camera to be accessed. Once you have allowed the program to access the camera you will need to select the appropriate camera in the drop down menu. The options allow for the front facing or rear facing camera.
3. Tap the screen when you are ready to capture the image.
4. Celebrate!

Remember Facesheets must be attached to the PCR for all patients! Other documents that might be useful to attach include DNR/POLST forms. Please contact dustin.gonzalez@amr.net if you have any questions on this update.
